Professional experience

May 2026 - Present

Remote

`closer` (`closer.earth`)

Contract Full-Stack Engineer

Platform automation for Closer, the operating system behind regenerative co-living communities ("villages").

Architected a "one-click village" provisioning system that launches a complete community-platform instance across DigitalOcean, Vercel, MongoDB, Mailgun, Firebase, and Stripe Connect from one typed config, cutting setup from a full day to about 20 minutes.

Designed the workflow engine as an idempotent, resumable step DAG over durable state, with full teardown and end-to-end tests against live cloud providers.

Shipped the operator surface as an Ink terminal UI, compiled single-file binaries, and an Elysia control API with token auth and streamed mutation endpoints.

Contributed production fixes to the core Closer platform: a Next.js 15 / Turborepo frontend and a Node + MongoDB API.

February 2025 -
February 2026
Remote

vionlabs

Team Lead

Led the team behind a greenfield customer portal and multi-source data platform for enterprise media-tech customers.

Hired and led a 4-engineer team building a greenfield, multi-tenant media-catalog portal while keeping the legacy customer portal live for enterprise customers.

Architected the new portal as a Turborepo monorepo (Next.js 15, tRPC, Fastify, Drizzle/Postgres) with catalog browsing, smart lists, filtering, tagging, and enterprise auth through WorkOS SSO and scoped API keys.

Built the data-sync services that unified content from upstream fingerprinting systems into one customer-facing portal.

Owned the GCP production platform in Terraform: Cloud Run, Cloud SQL, Pub/Sub, Eventarc, Secret Manager, VPC, and GitLab CI/CD.

Partnered with Sales through 4 trade shows, turning customer feedback into same-day product updates and driving the portal to feature-complete for the first 5-7 enterprise customers.

August 2023 - August
2024
Remote

collect.ai

Senior Frontend Engineer

Frontend platform work for a German receivables-management SaaS portal, internal component library, and published client SDK.

Built a type-safe form generator on React Hook Form and the internal MUI component library, standardizing form development across the collections portal.

Introduced Redux Toolkit and RTK Query to simplify state management and data fetching in a large React/TypeScript monorepo.

Drove a platform-wide UI consistency pass through Storybook-documented components, polished loading and modal states, and shared SDK updates.

Modernized package publishing from NPM to GitHub Packages with reusable GitHub Actions and a publish-and-test SDK pipeline.

October 2022 – June
2023

freelance

Full-Stack Developer

Co-created and continue to operate whocards.cc, an owned conversation-card product with an Astro + Stripe storefront, automated checkout, and fulfillment integrations that have shipped ~600 orders.

Integrated 2 fulfillment providers (Zenfulfillment, later Egon) and routed orders to regional carriers across direct storefront sales and brand-ambassador channels.

Built J3D.AI, a real-time AI workshop-summary app (Next.js, tRPC, Prisma, Supabase, GCP) with live audio capture, ffmpeg-based transcription, and editable AI-generated next steps.

Shipped Tezos NFT experiences for proofofperformance.xyz and circa.art, including live on-chain minting tooling and marketplace work on the Taquito stack.

February 2017 –
November 2022
Remote

net2phone

Engineering Lead / Full-Stack Engineer

2020 – 2022 • react

Cross-Team Intrapreneur

Built a WebRTC browser dialer (React, Redux, TypeScript, JsSIP) supporting multiple call-server configurations, a core piece of the modern web client.

Introduced React micro frontends to modernize the legacy Angular system and accelerate cross-team feature delivery.

2019 • angular

Lead Front-End Engineer & Scrum Master

Led a shared component library and reusable module extensions across the Unite Angular web client, improving UI consistency and feature rollout speed.

Drove front-end modernization of the Unite client, including major-version Angular upgrades, to improve performance and maintainability.

2018 • react native

Mobile Engineer

Developed live chat and calling features in the React Native mobile app, improving customer communication flows.

Streamlined code generation processes to accelerate mobile app releases.

2017 • go

Backend Engineer

Refactored core messaging microservices in Go (engine, user service, shared libraries) to improve scalability and maintainability.

Implemented unit testing across key services to improve reliability.

May 2016 - January 2017

takt digital

Miami

Software Engineer

Built a serverless streaming-media pipeline (AWS Lambda + Bitmovin transcoding) as the primary developer, carrying the product from MVP through a startup's second Y Combinator round.

Delivered the Aapryl fintech analytics dashboard MVP end-to-end with Angular and Node.js.

`education`

Education

march 2016 - may 2016 • miami

Ironhack Bootcamp

Completed 400+ hours of intensive web development training focused on Ruby on Rails, JavaScript, HTML, Git, and test-driven development through hands-on projects.

2011 - 2013 • new york

City College of New York, CCNY

Pursued coursework in computer science, focusing on algorithms, data structures, and programming principles.
