SKILLS

Languages	TypeScript, JavaScript, Go, SQL
Frontend	React, Next.js, Astro, React Native, Angular, Storybook
Backend	Node.js, tRPC, Fastify, Elysia, WebRTC, REST APIs
Data	PostgreSQL, Drizzle, Prisma, MongoDB, Supabase
AI	Audio transcription pipelines (ffmpeg), AI-assisted engineering (Claude Code, agentic workflows)
Infra & DevOps	GCP, AWS, Terraform, Docker, CI/CD, Cloud Run, Vercel
Tooling	Turborepo, Bun, pnpm, GitHub Actions, Playwright

PROFESSIONAL EXPERIENCE

Closer (closer.earth)

May 2026 – Present

Contract Full-Stack Engineer

Remote

Platform automation for Closer, the operating system behind regenerative co-living communities ("villages").

Architected a "one-click village" provisioning system that launches a complete community-platform instance across DigitalOcean, Vercel, MongoDB, Mailgun, Firebase, and Stripe Connect from one typed config, cutting setup from a full day to about 20 minutes.

Designed the workflow engine as an idempotent, resumable step DAG over durable state, with full teardown and end-to-end tests against live cloud providers.

Shipped the operator surface as an Ink terminal UI, compiled single-file binaries, and an Elysia control API with token auth and streamed mutation endpoints.

Hardened the core Closer API (Node + MongoDB) to boot cleanly on fresh databases — automatic config seeding, admin bootstrap, and startup race-condition fixes — unblocking one-click provisioning.

Vionlabs

February 2025 – February 2026

Team Lead

Remote

Led the team behind a greenfield customer portal and multi-source data platform for enterprise media-tech customers.

Hired and led a 4-engineer team building a greenfield, multi-tenant media-catalog portal while keeping the legacy customer portal live for enterprise customers.

Architected the new portal as a Turborepo monorepo (Next.js 15, tRPC, Fastify, Drizzle/Postgres) with catalog browsing, smart lists, filtering, tagging, and enterprise auth through WorkOS SSO and scoped API keys.

Built the data-sync services that unified a 1.5M-title catalog from upstream fingerprinting systems into one customer-facing portal.

Owned the GCP production platform in Terraform: Cloud Run, Cloud SQL, Pub/Sub, Eventarc, Secret Manager, VPC, and GitLab CI/CD.

Shipped new prospect-targeted features ahead of each of 4 trade shows and turned booth feedback into same-day product updates, driving the portal to feature-complete for its first 10 enterprise customers.

Senior Frontend Engineer

Remote

Frontend platform work for a German receivables-management SaaS portal, internal component library, and published client SDK.

Built a type-safe form generator on React Hook Form and the internal MUI component library, powering 25 unique forms on the portal's core collections screen from a single config-driven API.

Migrated the portal's state management to Redux Toolkit and RTK Query, cutting 2,500+ net lines across 116 files of the React/TypeScript monorepo.

Drove a platform-wide UI consistency pass across the 63-component internal UI library, authoring 25 Storybook stories and polishing shared loading and modal states.

Modernized package publishing from NPM to GitHub Packages with reusable GitHub Actions and a publish-and-test SDK pipeline.

Freelance

October 2022 – June 2023

Full-Stack Developer

Co-created and continue to operate whocards.cc, an owned conversation-card product with an Astro + Stripe storefront and automated fulfillment across 2 providers, shipping ~600 orders through direct and brand-ambassador channels.

Built J3D.AI, a real-time AI workshop-summary app (Next.js, tRPC, Prisma, Supabase, GCP) with live audio capture, ffmpeg-based transcription, and editable AI-generated next steps.

Net2phone

February 2017 – November 2022

Engineering Lead / Full-Stack Engineer

Remote

Six years across backend (Go), mobile (React Native), and web (Angular → React) on the Unite UCaaS platform, serving 200K+ business customers.

Built a WebRTC browser dialer (React, Redux, TypeScript, JsSIP) supporting multiple call-server configurations, upstreaming in-band DTMF support to JsSIP.

Introduced React micro frontends into the core Angular client, shipping 5 client-heavy features across 3 teams (e.g. a device-provisioning UI programming 90 buttons per business phone).

Led the shared component library and major-version Angular upgrades as lead front-end engineer and scrum master.

Refactored core Go messaging microservices and implemented unit testing across key services.

Takt Digital

May 2016 – January 2017

Software Engineer

Miami

Built a serverless streaming-media pipeline (AWS Lambda + Bitmovin transcoding) as the primary developer, carrying the product from MVP through a startup's second Y Combinator round.

OPEN SOURCE

prism-rails — A Rails syntax highlighter gem wrapping Prism.js for simple asset pipeline usage. 250K+ downloads on RubyGems.

EDUCATION**Ironhack Bootcamp**

March 2016 – May 2016 · Miami

400+ hour full-stack immersive: JavaScript, Ruby on Rails, and test-driven development.

City College of New York, CCNY

2011 – 2013 · New York

Computer science coursework: algorithms, data structures, and programming principles.
